

Cold Hardy Landscaping

Assess the Location

1. How much sun does the area receive?
2. What is the soil condition (sandy, clay etc.)? Will it need amendment?
3. Which direction does the area face?

Plant Properly

1. Amend the soil if needed.
2. Never plant deeper than the existing soil level.
3. Use hardy plants that are right for the location.
4. Water well to establish a deep root system.

Now it's time to pick the plants! Use the lists below to find the right plants for your area.
